ACKNOWLEDGEMENT

I am using this opportunity to express my gratitude to everyone who supported me throughout the Internship Program. I am thankful for their aspiring guidance, invaluable constructive criticism and friendly advice during this work. I am sincerely grateful to them for sharing their truthful and illuminating views on a number of issues related to this work.

I would like to sincerely thank the HR Manager and my project mentors at 7Con Technologies Pvt. Ltd. for giving me the opportunity to intern as an IT Intern with their organisation and for their continuous support and guidance throughout the internship period from 1st June 2026 to 31st July 2026. Their patience in explaining concepts and reviewing my work helped me understand real-world content management practices and improved my technical and professional skills considerably.

I would also like to thank the faculty of the School of Computer Science and Engineering, IILM University, for their constant encouragement and for providing the academic foundation that made this internship a valuable learning experience.

I express my gratitude to my parents for their blessings.

CHAPTER 4: PROJECT DESCRIPTION

4.1 Introduction

This report presents an account of the internship undertaken by Hammad Siddiqui as an IT Intern at 7Con Technologies Pvt. Ltd., an ISO 9001:2008 certified content management solutions company based in Noida, Uttar Pradesh, from 1st June 2026 to 31st July 2026. The internship provided an opportunity to gain hands-on, industry-level exposure to content management systems (CMS), website content operations, and IT support workflows that are central to the organisation's business of delivering content management expertise to its clients. The following sections describe the organisation, the problem area addressed, the objectives and scope of the work undertaken, the technologies and tools used, the system architecture followed, the methodology adopted, and the outcomes achieved during the internship.

4.2 Organization Profile

7Con Technologies Pvt. Ltd. is an ISO 9001:2008 certified IT services company specialising in content management solutions, positioning itself as “the Content Management Experts.” The organisation is headquartered at Tower-A, I-Thum, Sector-62, Noida, Uttar Pradesh, and works with clients across industries to design, implement, and maintain content management systems, digital documentation platforms, and related IT infrastructure. The company's core strength lies in structuring, organising, and delivering large volumes of digital content efficiently, reliably, and in compliance with quality standards.

4.3 Problem Statement

Organisations today generate and manage large volumes of digital content across websites, portals, and internal systems. Without a structured content management process, this content becomes difficult to organise, update, retrieve, and maintain, leading to inconsistencies, outdated information, and inefficient workflows. During the internship, the core problem addressed was the need to support the organisation's content management operations — ensuring that content across assigned platforms was accurately structured, updated, tested, and maintained in line with client and quality requirements.

4.4 Project Objectives

- To gain practical exposure to real-world content management systems and IT support workflows.

- To assist in uploading, formatting, and editing content on client websites through the organisation's CMS.
- To identify and fix formatting issues, broken links, and display inconsistencies across pages and devices.
- To support data entry, file organisation, and documentation tasks as part of daily operations.
- To develop working proficiency in the tools used in the organisation's day-to-day content workflows, and to strengthen attention to detail and professional workplace practices.

4.5 Scope of the Project

The scope of the internship was limited to the tasks and responsibilities assigned by the organisation over the two-month duration. This primarily involved supporting content management activities — uploading and formatting content, fixing minor layout and display issues, testing pages across browsers and devices, entering and organising data, and maintaining internal documentation — while coordinating with the internal team to ensure timely and accurate delivery of tasks. The work did not extend to independent client-facing decision-making but focused on execution, learning, and support under the guidance of the assigned mentors.

4.6 Technologies and Tools Used

- Content Management System (CMS) platforms for uploading, editing, and publishing website content.
- HTML and CSS for fixing layout, formatting, and display issues on web pages.
- Web browsers and browser developer tools for cross-browser and cross-device testing.
- Spreadsheets (MS Excel/Google Sheets) for data entry and file/record organisation.
- Internal ticketing/task-tracking tools for logging issues and tracking task status.
- Communication tools (email/chat) for daily status updates and coordination with the reporting manager.

4.7 System Architecture

The content management workflow followed at the organisation is broadly structured around a client-server CMS architecture. Content is authored and managed through a CMS admin panel, stored in a backend database, and delivered to end users through a web front-end. A typical flow followed during the internship was: (i) task or content intake from the reporting manager, (ii) uploading, formatting, or editing the content within the CMS, (iii) testing the page across browsers and devices to catch layout or display issues, (iv) logging any issues found and fixing them, and (v) internal review before the content was marked complete. This structured pipeline ensured accuracy and consistency of content before it reached end users.

4.8 Methodology

The internship followed a task-based, mentor-guided methodology. Each day typically began with a short status update or task briefing from the reporting manager, followed by execution of the assigned tasks — content uploads, formatting fixes, QA testing, or data entry. Issues identified during testing were logged in the internal tracker, and completed tasks were submitted for review. Feedback from mentors was incorporated before a task was closed. This routine of briefing, execution, testing, and review repeated through the internship and allowed for steady improvement in accuracy and speed of work over time.

4.9 Expected Outcomes

- Improved accuracy, consistency, and quality of content across the platforms worked on.
- Hands-on familiarity with CMS-based content upload, formatting, and publishing workflows.
- Practical experience in QA testing — identifying and fixing layout, formatting, and cross-device display issues.
- Comfort with day-to-day IT-office tools: ticketing systems, spreadsheets, shared drives, and team communication tools.
- Enhancement of soft skills such as teamwork, time management, following instructions accurately, and professional conduct.
- Successful completion of the internship, as certified by 7Con Technologies Pvt. Ltd., with recognition of dedication, analytical thinking, and a positive attitude toward learning and teamwork.

4.10 Certificate of Completion and Other Communication Proof

The Internship Completion Certificate issued by 7Con Technologies Pvt. Ltd. is the official documentation confirming successful completion of the internship. It certifies that Hammad Siddiqui completed the internship as an IT Intern with 7Con Technologies Pvt. Ltd. from 1st June 2026 to 31st July 2026, and further confirms that the assigned responsibilities were completed diligently, with dedication, professionalism, analytical thinking, and a positive attitude toward learning and teamwork throughout the tenure. This certificate, dated 10th August 2026 and issued by the HR Manager on behalf of the organisation, serves as the primary and sufficient proof of the internship's successful completion and is reproduced below for reference, in addition to its inclusion in Chapter 3 of this report.
